

Analysis Phishing Email

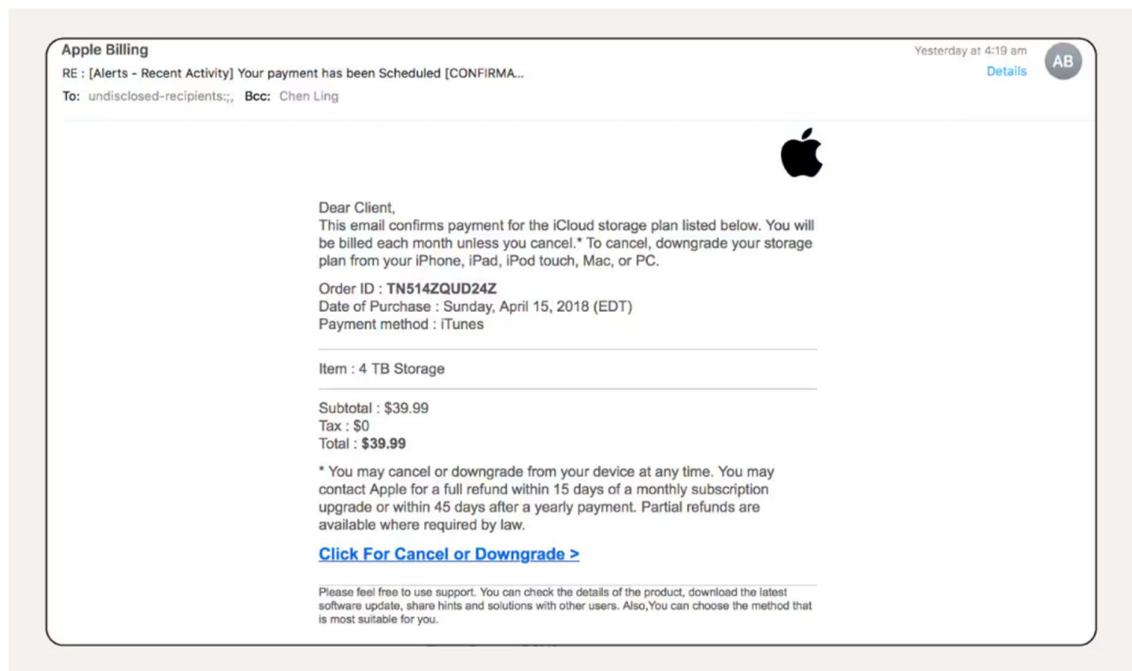

Objective: Identify phishing characteristics in a suspicious email sample.

Tools: Email client or saved email file (text), free online header analyzer.

What is Phishing?

- phishing email might claim your account is compromised and urge you to click a link to verify your information, often using urgent or threatening language.
- Phishers use various techniques to fool people into clicking on links or opening attachments that could lead to viruses or malware downloads onto your system

Sample Of Phishing Email

Key Points why This Email is Phishing

- You can tell this Apple iCloud phishing email is fake because it starts with "Dear Client" instead of using the user's name, and it falsely claims that Apple offers a 4 TB iCloud storage plan. Plus, the email is sent to "undisclosed recipients," has a name visible in the Bcc field, and uses poor grammar—more red flags.

- **Unusual request for payment amount of like \$39.99 but with no proper approval or steps to follow.**
- **Big mistake is that Bcc name is shown where if someone in Bcc then there name is not to be shown.**
- **And the main problem and irresponsible is that is not have the customer name in email to whom or which customer they are sending .**
